Geometric Invariant Theory for Polarized Curves

By Gilberto Bini

Springer-Verlag Gmbh Dez 2014, 2014. Taschenbuch. Book Condition: Neu. 236x151x17 mm. Neuware - We investigate GIT quotients of polarized curves. More specifically, we study the GIT problem for the Hilbert and Chow schemes of curves of degree d and genus g in a projective space of dimension $d-g$, as d decreases with respect to g . We prove that the first three values of d at which the GIT quotients change are given by $d=a(2g-2)$ where $a=2, 3.5, 4$. We show that, for $a \geq 4$, L. Caporaso's results hold true for both Hilbert and Chow semistability. If $3.5 < a < 4$, the Hilbert semistable locus coincides with the Chow semistable locus and it maps to the moduli stack of weakly-pseudo-stable curves. If $2 < a < 3.5$, the Hilbert and Chow semistable loci coincide and they map to the moduli stack of pseudo-stable curves. We also analyze in detail the critical values $a=3.5$ and $a=4$, where the Hilbert semistable locus is strictly smaller than the Chow semistable locus. As an application, we obtain three compactifications of the universal Jacobian over the moduli space of stable curves, weakly-pseudo-stable curves and pseudo-stable curves, respectively. 160 pp. Englisch.

Reviews

It is a single of my favorite publication. It really is really interesting through studying period. Your life period will probably be transform once you total looking at this book.

-- Janie Schultz I

This book will be worth purchasing. This is for anyone who statte that there had not been a worthy of looking at. Your daily life span will likely be convert when you total looking over this ebook.
